3P is pleased to offer an outstanding value in a Viking Folder originally installed in 1999 and mothballed in 2000 due to lack of work where it was installed.

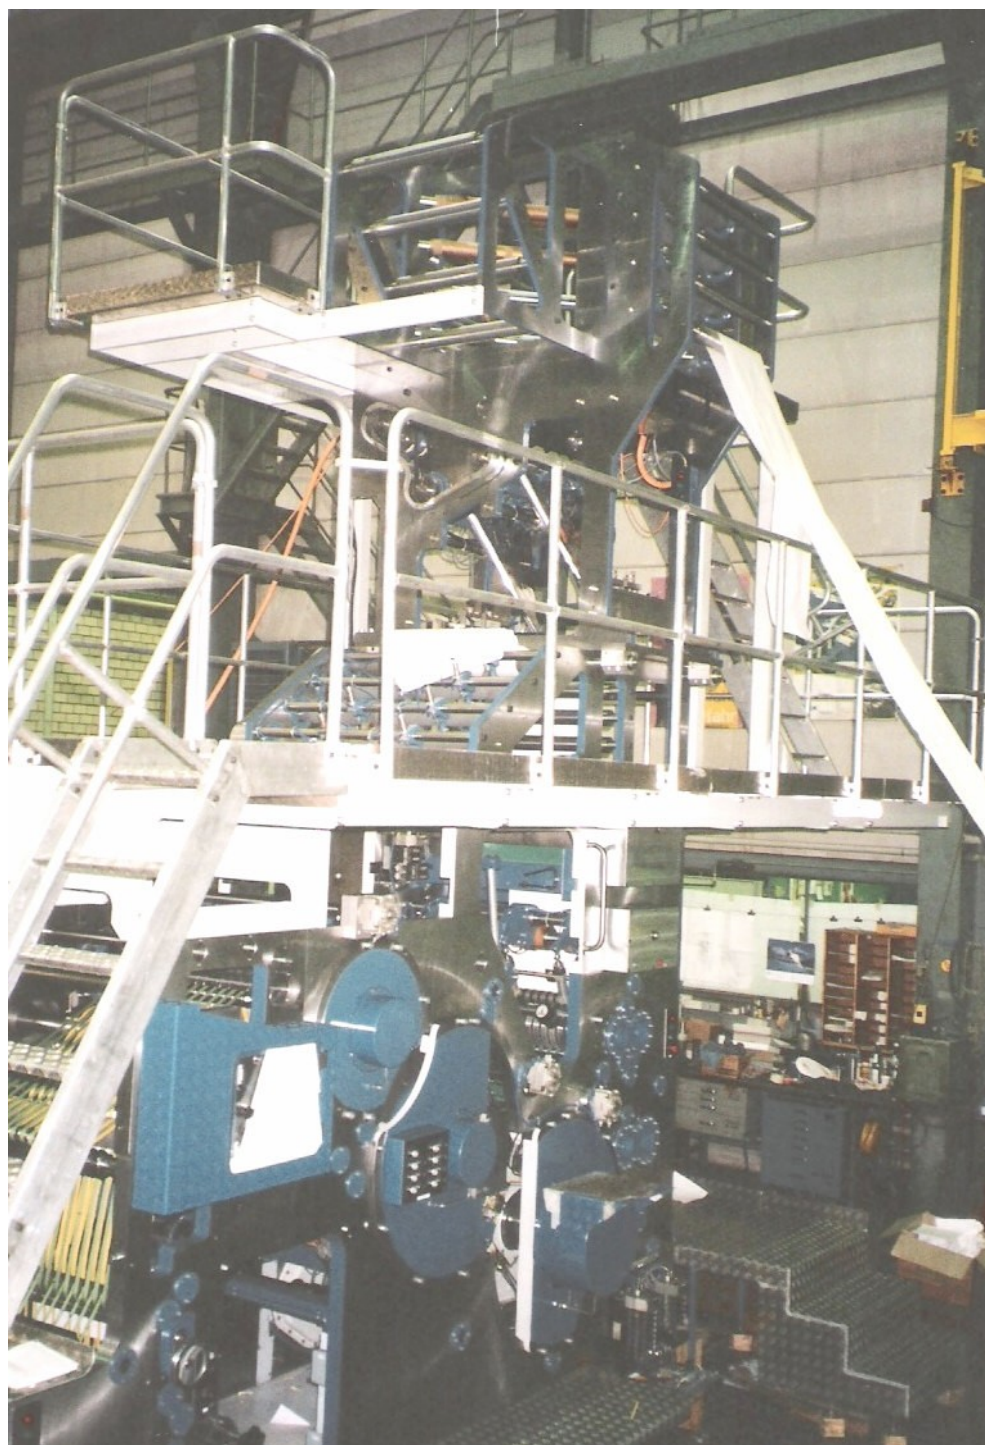

The Viking Folder is a high end, pinless jaw folder (optional quarter fold module can be easily retrofitted) that can be used in a variety of formats and sizes. It is suitable for any heatset application.

This machine is configured with a double former arrangement, including a ribbon bypass assembly for up to four double width leads, and the outstanding Double Parallel Feature available on Viking Folders. Please see the attached photos of the folder.

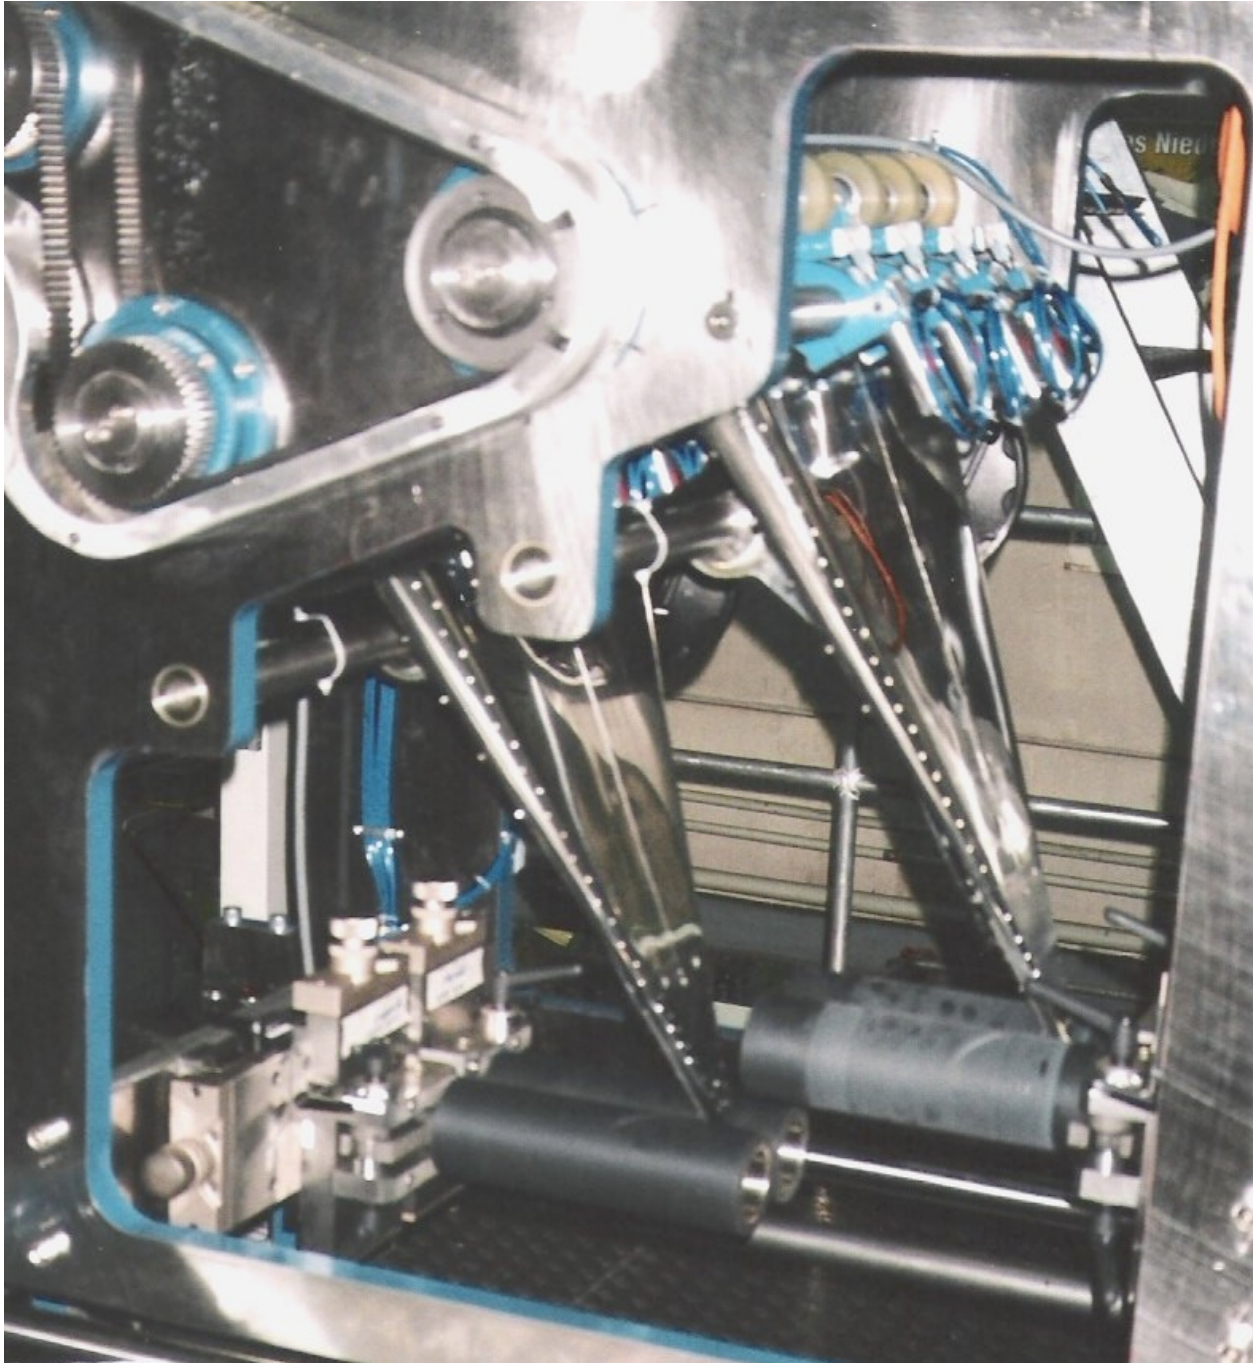

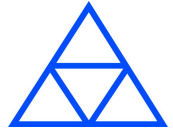

A spec sheet which outlines the features, options included with the machine and CAD files of the folder general arrangement and the folder superstructure for your review can be found on our web site at www.3Pinc.net or call +1 401 596 4520 for more information.

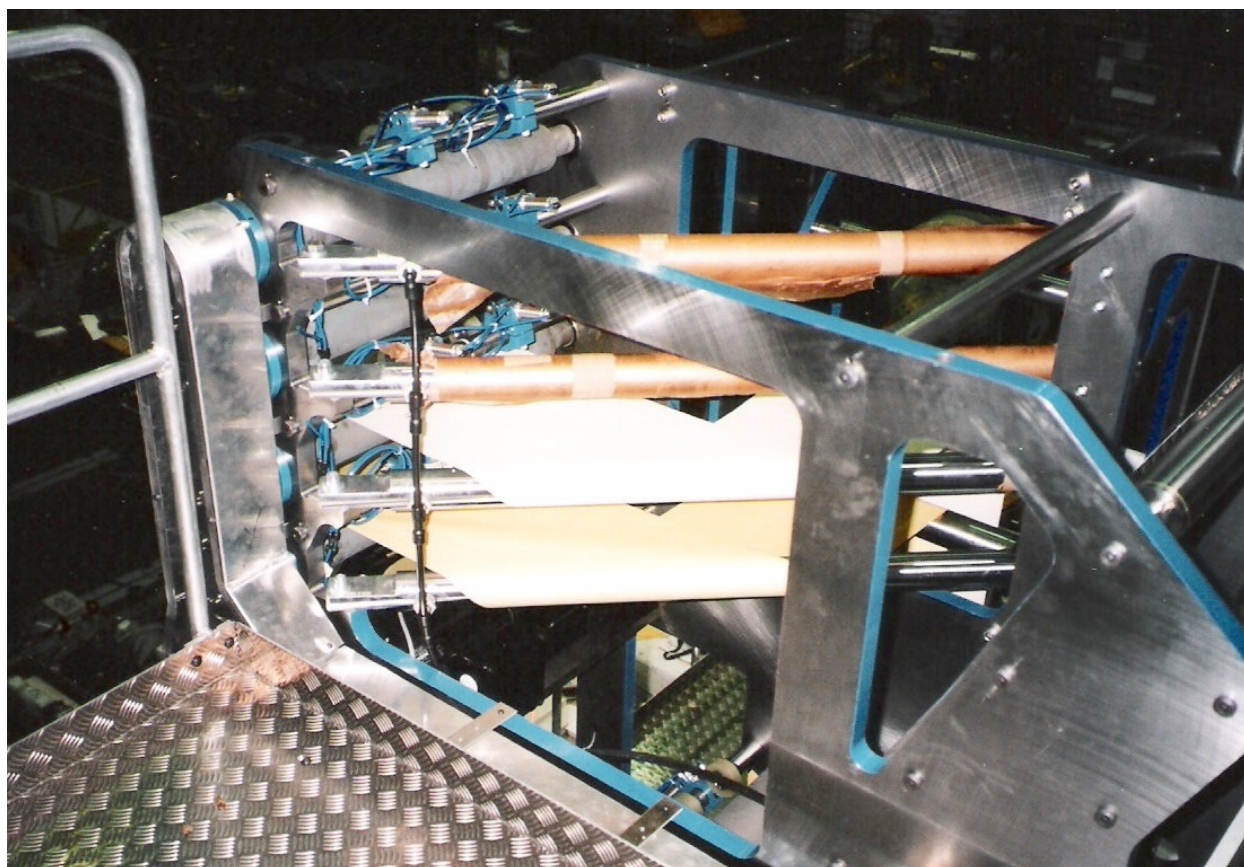

Viking Folder as Installed in early 1999
